An Extraordinary Visit to Tai Kwun

Last Sunday, I visited a place full of heritage - Tai Kwan with my family. There was a historic Central Police Station compound - the former Central Police Station, Central Magistracy and Victoria Prison. The buildings had more than 170 years of history. Nowadays, Tai Kwun serves as a place for exhibitions and education.

We visited an exhibition - Behind Your Eyelid by Pipilotti Rist. The moving image installations of Rist were so famous. I was attracted by "Pixel Forest" most because I felt like I was going under the skin. A lot of pixels installations were skinning in different colours around me. I could walk through them, look at them or even stay at the corner. I felt so relaxed and amazed.

I learnt lots of history, stories and people relevant to Tai Kwun. I was so impressed.

An Extraordinary Visit to M+ Museum

I had an extraordinary visit to M+ Museum with my family last month. I like it because it's so amazing.

M+ Museum situated in the West Kowloon Cultural District. The M+ collections are from Hong Kong, the Mainland and other locations within Asia. There are six thematic exhibitions with visual artworks, sculptures, ink arts, installations, moving image works and digital media.

The 3/F Roof Garden is nicely landscaped and we can enjoy delightful view of the surrounding West Kowloon Cultural District as well as the Victoria Harbour and Hong Kong Skyline.

I haven't seen this special exhibition before. It impressed me a lot. The view of Victoria Harbour is amazing. We saw the view of sunset on the 3/F Roof Garden. M+ Museum attracted me to visit again. I look forward to visiting Yayoi Kusama's exhibition.

An Extraordinary Visit to Ocean Park

I love ocean animals very much, especially dolphins because they are cute. Therefore, I decided to go to the Ocean Park on my birthday. This was my extraordinary visit to Ocean Park in my life.

Yesterday was my birthday, I went to Ocean Park with my family. I look forward to seeing the dolphin show. When the show began, some dolphins started to perform. I sat in the front and felt amazed.

Suddenly, one of the dolphins got out of the water and landed in front of me. It looked at me with tears. It seemed to give me a signal to help it. I felt astonished and sorrowful. I stopped the show and rescued the dolphin. I found that the dolphin had already performed for forty hours. I was angry about that.

After that, I wrote a letter to Ocean Park and asked to cancel the dolphin show. I hope that Ocean Park will listen to my opinion because it is too cruel to the dolphins. In the end, Ocean Park really took my opinion and cancelled the dolphin show. I learnt that we should respect and protect the animals. Then, we can live together happily in the world, building a harmonious environment between human and animals.

An Extraordinary Visit to Hong Kong Science Museum

Last year, I went to Hong Kong Science Museum with my best friend, Panthea. We went there to see the robot exhibition because she loves robots very much. The Hong Kong Science Museum is situated in Tsim Sha Tsui and we went there by MTR.

The exhibition was divided into five parts: Marvel, Obey, Imagine, Make and Future. At the entrance of the exhibition, there was an animated baby and a big clock. The animated baby was so realistic and the clock had twelve zodiac signs with Roman numbers on it. Next, we saw the dancing monkey and the ballerina machine toys.

Some robots can walk on two legs, jump and even do a somersault. Others can express emotions with facial expressions and look around with eye cameras to capture the surrounding environment. Just like "Zeno" which was designed for children, he can detect human facial expression and to imitate our actions. We also saw the world's first two-armed robot "Barter", which was designed to work together with people. They all involved complicated mechanism which laid the foundation for developing robots.

Suddenly, we were attracted by "Pepper". She was a cute and friendly robot. She had a monitor on her chest. Her ears glowed blue when answering our questions. We shook hands and played games with "Pepper". Finally, we saw "Kodomoroid". She was a robot reporter from Japan. She looked like human with eyes, ears, teeth, arms, legs and skin.

In this exhibition, I learnt the development of robots. Scientists quested for more artistic and functional robots that change our lives. In the future with the use of artificial intelligence, robots will be smarter and more useful for human.
